READ SAFETY DIRECTIONS BEFORE OPENING OR USING

Monza®
Herbicide by Monsanto

ACTIVE CONSTITUENT: 750g/kg SULFOSULFURON

GROUP B HERBICIDE

Monza® herbicide by Monsanto is a selective herbicide for the control of certain weeds in wheat and triticale.

READ COMPLETE DIRECTIONS FOR USE BEFORE USING THIS PRODUCT.

Monza® is a registered trademark of Monsanto Technology LLC used under license by Nufarm Australia Limited

nufarm.com.au

APVMA Approval No.: 49993/0707

DIRECTIONS FOR USE

RESTRAINTS
DO NOT apply more than once per season.
DO NOT apply to crops undersown with legumes.
DO NOT spray when very dry conditions prevail.
DO NOT use on furrow or flood irrigated crops.
DO NOT apply to soils with pH over 8.5.

Weed control may be reduced if rain fall occurs soon after application.

PRE-EMERGENT APPLICATION

<table>

<th>CRITICAL COMMENTS</th>
</tr>
</thead>
<tbody>
<tr>
<td>Wheat, Triticale</td>
<td>Barley grass*, Brome grass**, Wild turnip</td>
<td>25g/ha</td>
<td>Apply to bare soil prior to sowing or at sowing and incorporate by the sowing operation. Application should not be made to ridged or excessively cloddy soil. In conservation tillage situations where weeds and grasses have emerged apply as a tank mixture with the recommended rate of Roundup PowerMAX® prior to sowing.</td>
</tr>
<tr>
<td></td>
<td>Weeds as above plus the control of Wild oats</td>
<td>25g/ha plus 1.6L of Avadex® Xtra</td>
<td>For best results follow the Avadex® Xtra label directions for incorporation.</td>
</tr>
<tr>
<td></td>
<td>Weeds as above plus Annual ryegrass, Canary grass, Fumitory, Wireweed (Hogweed)</td>
<td>25g/ha plus 800mL Triflur® 480 or TriflurX®</td>
<td>For best results follow the trifluralin label directions for incorporation.</td>
</tr>
</tbody>
</table>

* Suppression only
POST-EMERGENT APPLICATION
Apply to wheat and triticale from early crop emergence to the 5 leaf/early tillering growth stage (Z11-15, 22).

USE THE SURFACTANT/WETTING AGENT - POST EMERGENT.
Always add Bonza® at 1-2L/100L (1-2% volume/volume) of final spray volume.

<td></td>
<td>Volunteer canola (except canola tolerant to Group B herbicides), Wild radish, Wild turnip</td>
<td>Apply at the cotyledon to 4 leaf stage</td>
<td>20g/ha</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Volunteer field peas</td>
<td>Apply at the 1-3 leaf stage</td>
<td>25g/ha</td>
<td></td>
</tr>
</tbody>
</table>

* Suppression only

NOT TO BE USED FOR ANY PURPOSE, OR IN ANY MANNER, CONTRARY TO THIS LABEL UNLESS AUTHORISED UNDER APPROPRIATE LEGISLATION.

WITHHOLDING PERIOD: NOT REQUIRED WHEN USED AS DIRECTED.

CROP ROTATION GUIDELINES
Where the product is applied at the rate of 20 to 25g/ha: Wheat and triticale can be planted the following season without restrictions. For other specified crops, the Monza herbicide treated area may be replanted after the interval indicated in the table below. These recommendations are made on the assumption that Monza herbicide is applied to a wheat or triticale crop that reaches maturity in the season of application.

<table>
<thead>
<tr>
<th>PLANT BACK PERIOD: VIC, NSW, WA, SA, TAS ONLY</th>

<td>6.5 to 8.5</td>
</tr>
<tr>
<td></td>
</tr>
</tbody>
</table>

* Includes natural regeneration of sub clover and medics. DO NOT apply to soils with a pH (water) >8.5.

GENERAL INSTRUCTIONS
Monza herbicide should be used under the Nufarm Stewardship Program. Monza herbicide is a selective herbicide absorbed by foliage and roots. It is rapidly translocated and acts by inhibiting acetolactate synthase (ALS), an enzyme necessary for root and shoot growth in sensitive plants.

Monza herbicide is a water dispersible granular herbicide for use in wheat and triticale. It can be used as a pre-plant, incorporated by sowing, for the control of wild turnip and suppression of barley grass and brome grass, or as a post-emergent for the control of silver grass, wild radish and wild turnip, and suppression of barley grass, brome grass, wild mustard (Sinapis arvensis) and wild oats.

PRE-EMERGENT
Apply to bare soil prior to sowing or at sowing and incorporate by the sowing operation to give thorough mixing. If applied to dry soil and sowing is to be delayed, incorporate immediately after spraying to prevent loss by wind erosion. For best results apply to moist soil when follow up rain is likely to occur within 7-10 days. Weeds may emerge and will become stunted and uncompetitive soon after application although final results may not show for some weeks.

POST-EMERGENT
Weeds should be young and actively growing. Use the higher rate under heavy weeds pressure and for larger weeds. A follow up spray with a suitable herbicide may be necessary to control subsequent germinations. Best weed control is obtained when rainfall wets the soil to a depth of 5 to 7.5cm within 7-10 days of application. Weeds will become stunted and uncompetitive soon after application although final results may not show for some weeks. When treatment is delayed or where weeds are not actively growing due to adverse conditions, for example, dry, waterlogged, frosty or diseased conditions, nutrient deficiency, high insect pressure or previous herbicide treatment, reduced levels of control may result. Monza herbicide will remain in the soil for a period of time. The persistence of Monza herbicide in the soil is dependent on various environmental conditions e.g. soil pH, soil moisture, soil temperature and organic matter. Crops other than wheat and triticale may be very sensitive to low soil concentrations of Monza herbicide, thus prior to using the product, careful consideration should be given to crop rotation plans (see Crop Safety and Crop Rotation Guidelines).

MIXING
Monza herbicide is a water dispersible granular herbicide which mixes readily with water and is applied as a spray.
1. Partly fill the spray tank with water.
2. Start the agitation.
3. Add the correct amount of product to the spray tank with the agitation system running.
4. Continue agitation while topping up the tank with water and while spraying.
5. In tank mixes, Monza herbicide must be in suspension before adding the companion product or surfactant (e.g. Bonza).
6. Use the spray mix within 24 hours of preparation.

APPLICATION
Apply by boom spray producing a FINE to MEDIUM spray quality. Ensure good spray coverage is obtained. Apply using 40 to 100 litres of water per hectare. Avoid overlapping of boom runs. Use higher water volumes where crop or weed density is high. DO NOT apply by aircraft.

SPRAYER CLEANUP
Where the sprayer is being used to spray wheat or triticale crops, rinse the sprayer thoroughly with water. Where the sprayer is being used to spray crops other than wheat or triticale:
1. Drain tank and rinse tank and spray boom with clean water for at least 10 minutes.
2. Fill the tank with clean water and add to it 300mL of household chlorine bleach (containing 4% chlorine) per 100L of water. Rinse hoses and boom and leave in tank for 15 minutes whilst agitating. Drain through nozzle.
3. Repeat step 2 and then rinse thoroughly with clean water to remove all traces of chlorine bleach.
4. Nozzles and filters should be cleaned separately.
5. Dispose of all water used for cleaning.

Caution: DO NOT use chlorine bleach with ammonia. All traces of liquid fertiliser containing ammonia, ammonium nitrate or ammonium sulphate must be rinsed with water from the mixing and application equipment before adding chlorine bleach solution. Failure to do so will release a gas with a musty chlorine odour which can cause eye, nose and lung irritation. DO NOT clean equipment in an enclosed area.

COMPATIBILITY
Read and follow all label directions, restraints, plant back and withholding periods and safety directions for all tank-mix products. In tank mixes, Monza herbicide must be in suspension before adding the companion product or surfactant.

PRE-EMERGENT
Monza herbicide is compatible with Avadex® Xtra, Roundup® CT, Roundup PowerMAX® Roundup® Dry, Nuquat® 250, Spray•Seed® 250, Revolver® Triflur® 480 and Triflur® X®.

POST EMERGENT
Monza herbicide is compatible as a two way mixture with Archer®/Lontrel® (up to 300mL/ha), L.V.E. MCPA (up to 350mL/ha) and Nugrex®/Tigrex® (up to 750mL/ha) for treatment of bromegrass, wild oats, wild mustard (Sinapsis arvensis), wild radish and wild turnip. Always add Bonza at 1-2L/100L (1-2% volume/volume) of final spray volume. Monza may also be mixed with DC Trate® at 2L/100L (2% volume/volume) of final spray volume. Some increased temporary crop yellowing may occur when Monza herbicide is tank mixed with Nugrex/Tigrex.

INCOMPATIBLE
The following herbicides and insecticides are incompatible with Monza herbicide: Achieve® WG, dicamba, Nugrass®/Hoegrass®, Igran® 500 SC, Le-mat® and dimethoate.

CROP SAFETY
DO NOT use on winter cereals undersown with legume pasture crops e.g. medic, clovers, lucerne. DO NOT use on barley or oats. Monza herbicide is effective on a range of plants, even at low rates of application. Since many rotational crops are sensitive, growers will need to consider the soil carry-over effects on subsequent crops. Below average rainfall, high levels of applied Monza herbicide (greater than the recommended rates), pH greater than 6.5 and low soil temperatures and low rainfall all increase the carry-over risk. Where Monza herbicide is used on soil types with pH greater than 8 (1:5 soil/water suspension method) and less than 300mm of rainfall has occurred since application, further advice should be sought from Nufarm regarding crop rotations, except for wheat and triticale.

Note: Some crop yellowing or crop retardation may occur where a stress factor such as water-logging, Rhizoctonia, take-all, cereal cyst nematode, nutrient deficiency or trace element deficiency is already present. Early season crop retardation may occur where the product is used on soils with a pH greater than 8 and which are prone to zinc deficiency. See Crop Rotation Guidelines for further information.

RESISTANCE TO WEEDS WARNING
MONZA HERBICIDE

Monza herbicide is a member of the sulfonylurea group of herbicides and has the ALS inhibitor mode of action. For weed resistance management, this product is a Group B herbicide. Some naturally-occurring weed biotypes resistant to Monza herbicide and other Group B herbicides may exist through normal genetic variability in any weed population. The resistant individuals can eventually dominate the weed population if these herbicides are used repeatedly. These resistant weeds will not be controlled by Monza herbicide or other Group B herbicides. To prevent or at least minimise the risk of resistant weeds occurring, use Monza herbicide tank mixes (if appropriate) and/or rotations with herbicides having different modes of action effective on the same weed species. DO NOT make more than one application of an ALS inhibitor herbicide to a crop, either pre-sowing incorporated by sowing or post crop and weed emergence. Since the occurrence of resistant weeds is difficult to detect prior to use, Nufarm Australia Limited accepts no liability for any losses that may result from the failure of Monza herbicide to control the resistant weeds. Advice as to strategies and alternative treatments that can be used should be obtained from your local farm chemical supplier, consultant, local Department of Agriculture, Department of Primary Industries, or a Nufarm representative.

PROTECTION OF CROPS, NATIVE AND OTHER NON-TARGET PLANTS
DO NOT apply or drain or flush equipment on, or near desirable trees or other plants, where their roots may extend or in situations where by movement of soil, or seepage, absorption of the herbicide may occur. DO NOT apply under weather conditions or from spraying equipment that may cause spray to drift onto nearby susceptible plants/crops, cropping lands or pastures. Dangerous to plants, including aquatic plants.

PROTECTION OF WILDLIFE, FISH, CRUSTACEANS AND ENVIRONMENT
DO NOT contaminate dams, streams, rivers or waterways with the chemical, or used containers.

STORAGE AND DISPOSAL
Store in closed, original containers in a cool, well ventilated area. DO NOT store for prolonged periods in direct sunlight. DO NOT re-use containers. Triple rinse or (preferably) pressure rinse containers before disposal, and add rinsings to spray tank. DO NOT dispose of un-diluted
chemical on-site. Break, crush or puncture the containers and bury at a local authority landfill. If no landfill is available, bury the containers below 500mm in a disposal pit specifically marked and set up for this purpose clear of waterways, desirable vegetation and tree roots. Empty containers and product should NOT be burnt.

**SAFETY DIRECTIONS**
Will irritate eyes. Avoid contact with eyes. DO NOT inhale dust. Wash hands after use.

**FIRST AID**
If poisoning occurs, contact a doctor or Poisons Information Centre, phone Australia 13 11 26.

**MATERIAL SAFETY DATA SHEET**
For further information refer to the Material Safety Data Sheet (MSDS), which can be obtained from your supplier or from the Nufarm website - www.nufarm.com.au

In case of emergency: Phone 1800 033 498 Ask for shift supervisor. Toll free 24 hours.

**CONDITIONS OF SALE**
“Any provisions or rights under the Trade Practices Act 1974 or relevant state legislation which cannot be excluded by those statutes or by law are not intended to be excluded by these conditions of sale. Subject to the foregoing, all warranties, conditions, rights and remedies, expressed or implied under common law, statute or otherwise, in relation to the sale, supply, use or application of this product, are excluded. Nufarm Australia Limited and/or its affiliates (“Nufarm”) shall not accept any liability whatsoever (including consequential loss), or howsoever arising (including negligence) for any damage, injury or death connected with the sale, supply, use or application of this product except for liability which cannot be excluded by statute.”
