Dow AgroSciences

Lorsban™ 750 WG Insecticide

ACTIVE CONSTITUENT: 750 g/kg CHLORPYRIFOS (an anticholinesterase compound)

GROUP 1B INSECTICIDE

For control of certain insect pests in FRUIT and OTHER SITUATIONS as specified in the Directions For Use Table.

WATER SOLUBLE PACKAGING. KEEP DRY.
### DIRECTIONS FOR USE

**RESTRAINTS:**
DO NOT apply if bees are actively foraging.

<table>
<thead>
<tr>
<th>CROP</th>
<th>INSECT PEST</th>
<th>STATE</th>
<th>RATE</th>
<th>CRITICAL COMMENTS</th>
</tr>
</thead>
<tbody>
<tr>
<td>Apples</td>
<td>Apple dimpling bug</td>
<td>NSW, Qld, SA, Vic and WA only</td>
<td>67 g/100 L water (1 measure pack per 500 L water)</td>
<td>Apply up to late pink (balloon stage). Re-apply at the end of the flowering, if necessary. DO NOT apply for a minimum of three days before bees are actively foraging.</td>
</tr>
<tr>
<td></td>
<td>Light brown apple moth</td>
<td>All States</td>
<td>33 g/100 L water (1 measure pack per 1000 L water)</td>
<td>Commencing after petal fall, apply as a full cover spray at intervals of two weeks. This rate will also suppress mealy bug populations present at spraying (not in Tasmania).</td>
</tr>
<tr>
<td>Avocado</td>
<td>Queensland fruit fly ((Bactrocera tryoni))</td>
<td>NSW and Qld only</td>
<td>80 g plus 600 mL yeast hydrolysate per 30 L water (1 measure pack plus 2.5 L yeast hydrolysate per 122 L water)</td>
<td>Use 50 to 100 mL of mixture/tree as a strip or patch low on the tree every seven days. AVOID CONTACT WITH FRUIT.</td>
</tr>
<tr>
<td></td>
<td>Banana weevil borer</td>
<td>NSW and Qld only</td>
<td>333 g/100 L water (1 measure pack per 100 L water) OR 333 g/4 kg sand (1 measure pack per 4 kg sand)</td>
<td>Remove trash and apply 600 mL of spray or 30 g sand mixture as a 30 cm band around the base of the plant. Apply one application at maximum weevil activity in spring (October to November) and in autumn (March to April). <strong>NOTE:</strong> Complete season’s control is dependent on timely application.</td>
</tr>
<tr>
<td></td>
<td>Queensland fruit fly ((Bactrocera tryoni))</td>
<td>NSW and Qld only</td>
<td>80 g plus 600 mL yeast hydrolysate per 30 L water (1 measure pack plus 2.5 L yeast hydrolysate per 122 L water)</td>
<td>Use 50 to 100 mL of mixture/tree as a strip or patch low on the tree. Use every seven to ten days during periods of crop susceptibility. AVOID CONTACT WITH FRUIT.</td>
</tr>
<tr>
<td></td>
<td>Argentine ants ((Iridomyrmex hymillis))</td>
<td>Tas only</td>
<td>167 g/25 L water (1 measure pack per 50 L water)</td>
<td>To meet requirements to enter Tasmania, treat the base of plants and the surface of growing media. A white deposit will remain.</td>
</tr>
<tr>
<td>Grapevines</td>
<td>Light brown apple moth</td>
<td>All States</td>
<td>33 g/100 L water (1 measure pack per 1000 L water) OR 333 g/ha (1 measure pack per ha)</td>
<td>Apply initial spray just after berry set. Later schedule spray should be made as required.</td>
</tr>
<tr>
<td>Kiwi fruit</td>
<td>Light brown apple moth</td>
<td>All States</td>
<td>33 g/100 L water (1 measure pack per 1000 L water) OR 666 g/ha (2 measure packs per ha)</td>
<td>Apply the first application at green-tip, pre-blossom or post-blossom, after bees have been removed. The second application should be 14 days then every 21 to 28 days as required. Apply at least 10 days after dormant lime sulphur application.</td>
</tr>
<tr>
<td>Macrocarpa hedges</td>
<td>Dimpling bug ((Niasterna punctaticollis))</td>
<td>Tas only</td>
<td>33 g/100 L water (1 measure pack per 1000 L water) OR 333 g/ha (1 measure pack per ha)</td>
<td>Spray hedges adjacent to orchards in late winter to early spring to prevent adults entering the orchard.</td>

<td>NSW and Qld only</td>
<td>80 g plus 600 mL yeast hydrolysate per 30 L water (1 measure pack plus 2.5 L yeast hydrolysate per 122 L water)</td>
<td>Use 50 to 100 mL of mixture/tree as a strip or patch low on the tree every seven days. Use as an alternative to cover sprays, especially as an aid to integrated pest management, particularly integrated mite control. <strong>AVOID CONTACT WITH FRUIT.</strong></td>
</tr>
</tbody>
</table>

**NOT TO BE USED FOR ANY PURPOSE, OR IN ANY MANNER, CONTRARY TO THIS LABEL UNLESS AUTHORISED UNDER APPROPRIATE LEGISLATION.**

**WITHHOLDING PERIODS**

Apples, bananas, citrus, grape vines, kiwi fruit, passion fruit, pears, stone fruit:
**DO NOT HARVEST FOR 14 DAYS AFTER APPLICATION.**

Avocado:
**DO NOT HARVEST FOR 7 DAYS AFTER APPLICATION.**

**GENERAL INSTRUCTIONS**

**MIXING**

**SPRAY MIX**

One third fill the spray tank with water and add the required number of water soluble pre-packs to the strainer/sieve. Complete filling allowing the remaining water to run over the bags. The bags will completely dissolve in a few minutes.

**OR**

Add the required number of pre-packs to a mixing bucket and add enough water to completely cover the bags. Stir until the bags are completely dissolved and pour the premix into the spray tank. Triple rinse the bucket and stirring implement, adding the rinse water to the spray tank.

Agitate continuously to ensure thorough mixing before and during application. Only mix sufficient chemical for each day’s work.

Tank mixtures: Lorsban 750 WG should be added to the partially full spray tank first, followed by other dry flowables, suspension concentrates (flowables), aqueous concentrates and then emulsifiable concentrate formulations.

**COMPATIBILITY**

Lorsban 750 WG is compatible with benomyl, carbendazim, dicofol, dinocap, dodine, fenarimol, mancozeb, propargite, superior oils, tetradifon, thiram, thiophanate-methyl, ziram.

**APPLICATION**

Unless specified, it is essential to apply Lorsban 750 WG in sufficient water to obtain thorough coverage.

Apply through accurately calibrated equipment.

**CLEANING SPRAY EQUIPMENT**

Rinse water should be discharged onto a designated disposal area or, if this is unavailable onto unused land away from homes and water courses.

After using Lorsban 750 WG, empty the spray equipment completely and drain the whole system. Quarter fill the spray equipment with clean water and circulate through the pump, line, hoses and nozzles. Drain and repeat procedure twice.
INSECTICIDE RESISTANCE WARNING

GROUP 1B INSECTICIDE

For insecticide resistance management Lorsban 750 WG Insecticide is a Group 1B Insecticide.

Some naturally occurring insect biotypes resistant to Lorsban 750 WG Insecticide and other Group 1B insecticides may exist through genetic variability in any insect population. The resistant individuals can eventually dominate the insect population if Lorsban 750 WG Insecticide or other Group 1B insecticides are used repeatedly. The effectiveness of Lorsban 750 WG Insecticide on resistant individuals could be significantly reduced. Since occurrence of resistant individuals is difficult to detect prior to use, Dow AgroSciences Australia Limited accepts no liability for any losses that may result from failure of Lorsban 750 WG Insecticide to control resistant insects.

Lorsban 750 WG Insecticide may be subject to specific resistance management strategies.

For further information contact your local supplier or Dow AgroSciences representative.

PRECAUTIONS

Re-entry period

*Tree crops and Vines:* DO NOT allow entry into treated crops until spray deposits have dried. If prior entry is required, limit duration of entry and wear cotton overalls buttoned to the neck and wrist (or equivalent clothing) and chemical resistant gloves. Clothing must be laundered after each day’s use.

*Greenhouses:* DO NOT allow entry into greenhouses until spray deposits have dried and treated areas are adequately ventilated. If prior entry is required, limit duration of entry and wear cotton overalls buttoned to the neck and wrist (or equivalent clothing), chemical resistant gloves and half-facepiece respirator. Clothing must be laundered after each day’s use.

PROTECTION OF LIVESTOCK

Dangerous to bees. DO NOT spray any plants in flower while bees are foraging.

PROTECTION OF WILDLIFE, FISH, CRUSTACEANS, AND ENVIRONMENT

HIGHLY TOXIC TO BIRDS AND REPTILES. VERY HIGHLY TOXIC TO FISH AND AQUATIC INVERTEBRATES.

DO NOT re-apply to the same crop within 7 days (unless specifically recommended in the directions for use).

Spray drift may occur under adverse meteorological conditions or from certain spray equipment. DO NOT allow spray drift to occur onto sensitive areas including, but not limited to, natural streams, rivers or waterways and human dwellings. A spray drift management strategy such as those in the ‘Best Management Practices Manual for Cotton Growers’ or the ‘Pilots and Operators Manual’ should be applied.

Option for minimising drift to sensitive areas include not spraying within a certain distance of sensitive areas when wind is blowing towards them (see table for guidance) or ensuring that drifting spray will be intercepted by a catching surface such as a row of shelter trees, an unsprayed row of orchard trees, or hail netting.

<table>
<thead>
<tr>
<th>Situation</th>
<th>Recommended buffer distance (m)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Orchard (dormant trees, citrus, large trees)</td>
<td>30</td>
</tr>
</tbody>
</table>

DO NOT apply if heavy rains or storms that are likely to cause surface runoff are forecast in the immediate area within two days of application.

DO NOT apply when irrigating, or to waterlogged soil, or while water remains on the surface or in furrows, unless tailwater is captured on farm.

DO NOT allow contaminated runoff water from treated paddocks to enter adjacent areas or water bodies. Runoff contaminated by irrigation events (tailwater) and a 25 mm rain storm should be captured on farm for two days after application.

DO NOT contaminate streams, rivers or waterways with the chemical, used containers or containers used for mixing or holding treated seed.

SMALL SPILL MANAGEMENT

If the water soluble bag is ruptured and a spill occurs, wear protective equipment (See SAFETY DIRECTIONS). Remove granules from surfaces and sweep up residual material. Place in a container that will prevent further dispersion of the granules. If spilled inside a building, wash contaminated surface to deactivate the chloropyrifos with a solution of bleach (sodium hypochlorite) prepared according to the bleach label instructions. Prevent entry of spilled chemical or damaged containers into drains, dams or waterways.

If the liquid spray mix is involved, apply absorbent material such as earth, sand, clay granules or cat litter to the spill. Sweep up material when absorption is completed and contain in a refuse vessel for disposal in the same manner as for containers (see STORAGE AND DISPOSAL section).

STORAGE AND DISPOSAL

Store in closed, original container in a dry, cool, well-ventilated area out of direct sunlight.

Do not dispose of undiluted chemicals on site.

DO NOT store near food, feedstuffs, fertilisers or seed.

Puncture or shred and bury empty containers in a local authority landfill. If no landfill is available, bury the containers below 500 mm in a disposal pit specifically marked and set up for this purpose clear of waterways, desirable vegetation and tree roots.

Empty containers and product should not be burnt.
SAFETY DIRECTIONS
• Harmful if swallowed.
• Repeated minor exposure may have a cumulative poisoning effect.
• Will irritate the eyes.
• Avoid contact with eyes
• When preparing the spray and using the prepared spray, wear cotton overalls buttoned to the neck and wrist, a washable hat, elbow-length PVC gloves and a face shield or goggles.
• After use and before eating, drinking or smoking wash hands, arms and face thoroughly with soap and water.
• After each day’s use wash gloves, face shield or goggles and contaminated clothing.

FIRST AID
If poisoning occurs, contact a Doctor or Poisons Information Centre. Phone: Australia 13 11 26.
